

Severe Storms Possible Wednesday Night

July 27, 2021
2:28 PM

Key Messages

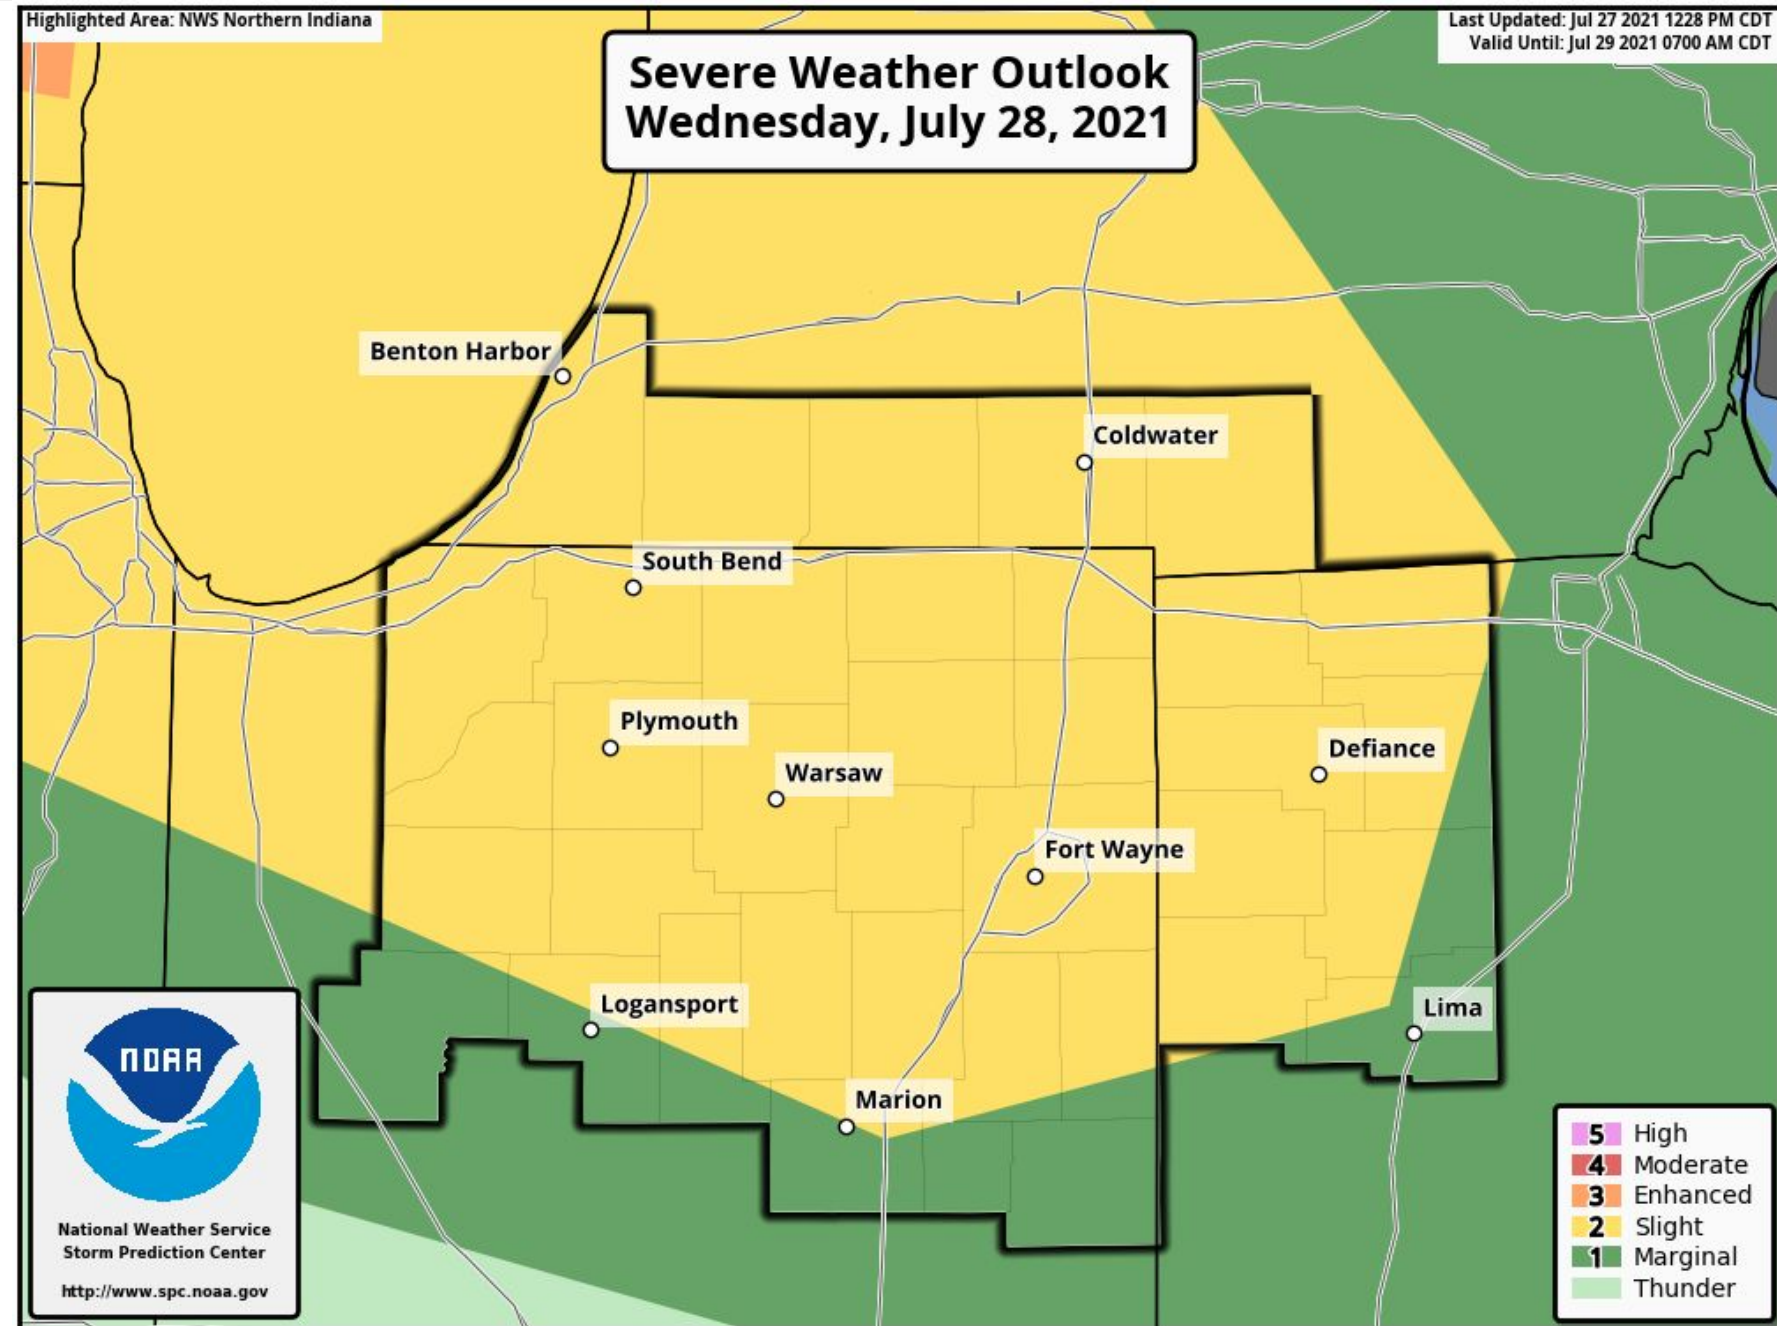

- Isolated thunderstorms are possible Wednesday PM.
- The slight risk is more for a large potential late Wednesday night/early Thursday morning convective system.
- There is still uncertainty in the track of that potential convective system that could keep it north of the area.
- The greatest storm threats are damaging winds and heavy rain

NEW Important Updates

- SPC Slight Risk shifted south due to father south model consensus track

Next Scheduled Briefing

- By 9 AM Tuesday
